

Patch Panel

JSMW64M and JSMW64M/HDVPDMT

Emerson Network Power has recently released the Trompeter 1.5 RU midsize mini weco patch jack panel. The panel features larger ID strips than the 1.0 RU panel while enabling a higher density than a 2.0 RU panel. All panels are made from durable black Arboron®. An optional cable management bar eliminates cable weight issue and keeps cables well organized.

The panel can be ordered fully loaded with the Trompeter 3 GHz normal through jacks terminated or unterminated. The part number for the fully loaded terminated version panel is JSMW64M/HDVPDMT. The model number for the blank panel is JSMW64M.

The mini weco jacks pictured in the panel come with staggered BNC jacks which allow the high density of miniature jacks while using full size Broadcast grade BNC connectors.

Key Features

- Larger ID strips for quick identification
- Made from durable black Arboron®
- Cable Management bar eliminates cable weight and keeps cables organized
